

# CO<sub>2</sub> Power Pack for FieldLiner 3™

**ALWAYS wear safety goggles or protective eye-wear when operating the unit!**

**NOTE:** Due to shipping regulations, the CO<sub>2</sub> cylinder has been shipped empty. Cylinders can be filled at your local welding equipment supply (gases) or beverage dispenser supply.

1. Bolt the CO<sub>2</sub> cylinder tank ring to the FieldLiner 3™ chassis using two bolts, washers and nuts.
2. Insert the CO<sub>2</sub> cylinder and quickly crack its valve open and closed (away from you) to blow out any possible debris.
3. Insert the plastic washer into the CO<sub>2</sub> regulator fitting (single ring towards regulator) and then install the regulator on the CO<sub>2</sub> tank.
4. With NO pressure in the FieldLiner 3™ paint tank, remove the plastic push plug from the brass tee on the top of the paint tank by pushing in on the collar of the fitting while pulling out on the plug.
5. Push the CO<sub>2</sub> pressure tube into the fitting that the plug came out of.
6. Make sure the regulator is closed by turning the regulator adjusting screw counter-clockwise several turns. Slowly open the CO<sub>2</sub> cylinder valve. The high pressure gauge will show the pressure in the CO<sub>2</sub> tank. If it is in the **RED ZONE**, refilling is necessary.
7. Pressurize the system by turning the regulator screw clockwise until the paint tank gauge reads the desired pressure (20-30 psi). **NEVER PRESSURIZE ABOVE 35 PSI.**

## IMPORTANT

1. After each use, always release the pressure. Close the valve on the CO<sub>2</sub> cylinder, and then release the pressure in the paint tank by rotating the outer collar of the safety relief valve 1/4 turn counter clockwise.
2. High pressure is extremely dangerous. Frequently check safety valves, lid gaskets, and tanks for any damage, or wear. **SHOULD ANY APPEAR**, contact the factory immediately for corrective action.
