

1 Gallon Cleaning Tank Kit Installation

(May also be used for a secondary color)

Box should include these parts:

- Tank with lid
- Mounting bracket with:
 - Two, split collars
 - 4 socket head cap screws

(Collars and screws installed on bracket for shipping)

INSTALLATION

Note: Your Newstripe Cleaning tanks are available for the left or right side of the machine. Instructions are the same for both models

1. Remove the paint pail from the machine.
2. Remove the (4) socket head cap crews and spit collars from the bracket.
3. Position the bracket on the handle and rest the base of the tank support on the tire.
4. Install the top and bottom split collars to the tank support and screw in loosely.
5. Adjust the bracket so it is square with the frame and the tank support is $\frac{1}{4}$ " – $\frac{1}{2}$ " above the tire and then tighten the screws.
6. Install the tank in the bracket and replace the paint pail.

OPERATION

1. Fill the tank with the appropriate solvent: water or soapy water for latex paints, mineral spirits or paint thinner for oil base paint.
2. Remove the lid when ready to flush the system.
3. Transfer the suction tube from the paint pail to flush the system completely.

Caution: With the return hose in the main pail. The cleaning tank will empty during cleaning. Turn off the pump when the cleaning tank becomes empty.
