

Highest Safety Standards

The Safe2Filter™ drum vent filter is compliant in all 50 states and conforms to OSHA, EPA and California regulations.

Our exclusive check valve closes the filter outlet keeping the drum closed and prevents vapors from escaping into the atmosphere when cans are not being processed.

The Safe2Filter has the highest flow rate available minimizing the potential for dangerous over pressurizing of the drum during operation.

Our Coalescing Element traps solids before they reach the carbon media, extending filter life.

Plus, Safe2Filter™ activated carbon filter adsorbs more VOC's and harmful vapors.

The Safe2Filter filter's cellulose cartridges is 96% biodegradable, can safely be sent directly to the landfill and decomposes quickly. Other Drum vent filters that are plastic encased can take years to break down.

Product Overview

The base model Safe2Filter™ drum vent filter is 50 state compliant and compatible with all manual, single can aerosol disposal systems. The Safe2Filter includes a standard check valve and highest flow rate available.

Saves you Money

With additional carbon media, replaceable cartridges, and a lower price than competitors, the Safe2Filter™ is more cost effective than any other drum vent filter.

1. The Safe2Filter™ cartridges are fully replaceable. Just remove the filter cartridge from the reusable base and replace with the new cartridge.
2. Each filter comes complete with an integral coalescing element. Other systems require a separate unit to be purchased.
3. The Coalescing element traps solids before they reach the carbon which helps prevent clogging so the filter last longer .

Specifications

Item Name	Safe2Filter™ Drum Vent Filter
Application	Filter for aerosol can disposal and recycling systems
Type	Single Unit
Compliance	Compliant in all 50 states and conforms to OSHA, EPA and California regulations
Composition	Filter Housing: Cellulose
Dimensions	Single unit: 4"x4"x13"
Filter Life	Single unit: Every 600 cans or 90 days
Shipping weight	3-bs
Includes	Safe2Filter™ Drum Vent Cartridge Filter, reusable filter base

Reduce the cost of Hazardous waste

With the Safe2Filter Drum Vent Filter

Product Features

Universal Design: The Safe2Filter™ drum vent filter is compatible with all manual, single can aerosol can disposal systems. The reusable base is made to fit the 3/4 inch opening on any steel drum.

Compliance: The Safe2Filter™ check valve closes the filter outlet to comply with OSHA, EPA and California regulations requiring the drum to be closed and prevent vapors from escaping into the atmosphere whenever you are not processing cans. The AeroVent lid also needs to be closed for compliance.

Longer Lasting Filter: The Safe2Filter™ contains more carbon than many other filters on the market for longer life. The environmentally friendly cellulose filter is 96% biodegradable and decomposes naturally as compared to plastic encased filters that take years to breakdown. Plus each filter includes a built-in, coalescing element.

Compliant in all 50 states: Unlike many drum filters, the Safe2Filter™ is compliant in all 50 states and conforms to OSHA, EPA and California SB1158 regulations.
