

1

Install Unit on Drum

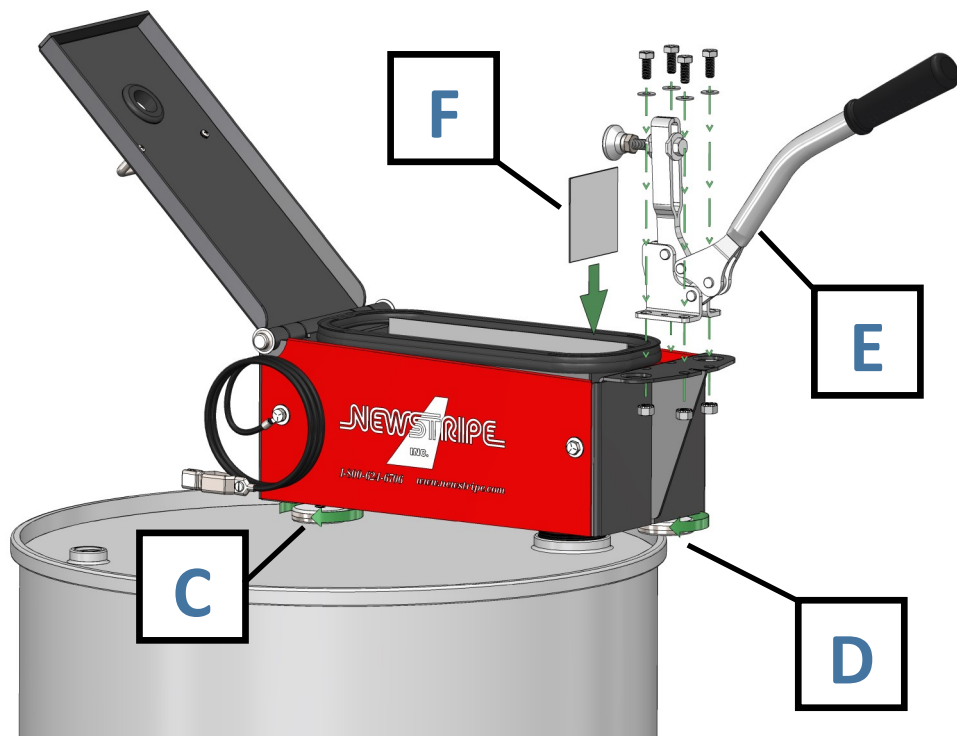

- Place pipe end (A) in large drum opening (rotate unit clockwise until it stops)
- Install lid handle (B) on lid with 2 screws

2

Assemble Parts & Secure Unit

- Lower rear foot (C) on top of drum, next to drum edge (turn unit as needed)
- Lower front foot (D) onto drum edge
- Install lid clamp (E) using 4 bolts, washers and nuts
- Insert can stop (F) into slot at front of tray

3

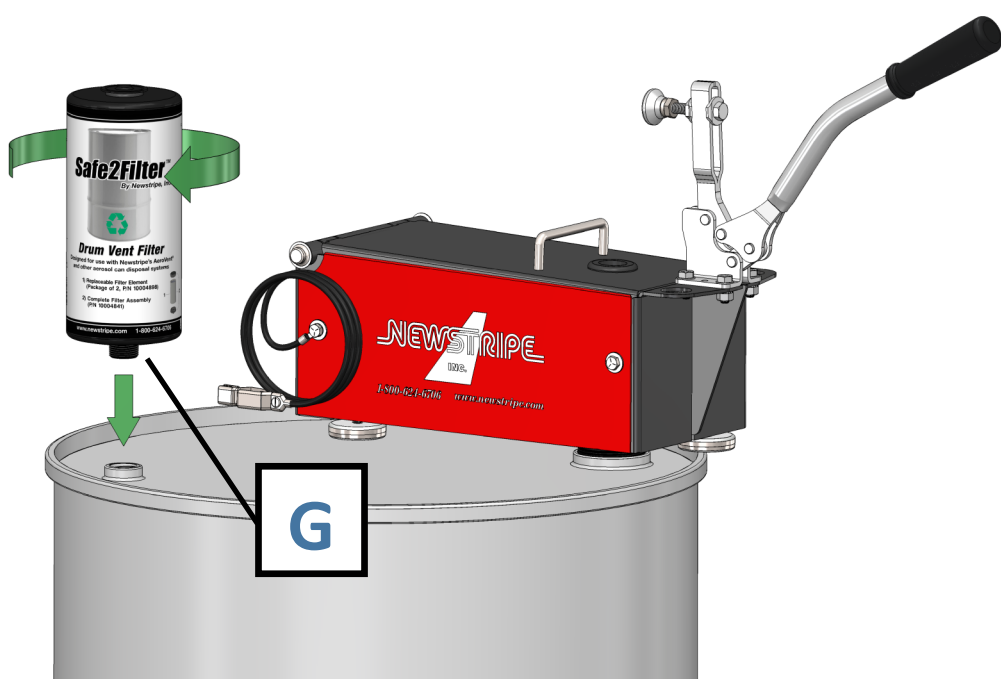

Install Filter Housing

- Install filter (G) in small drum opening
- Rotate clockwise until it stops

* For filter replacement use these part numbers:

Safe2vent #10004703 (Aerovent 1X)

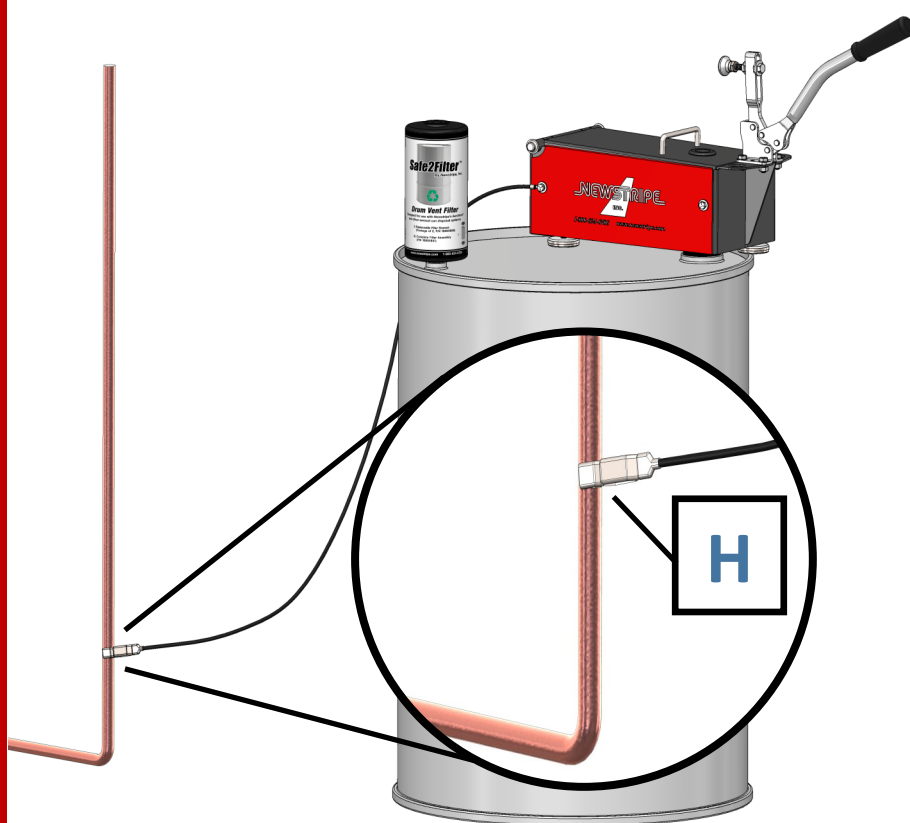

Safe2filter #10004898 (Aerovent Standard)

4

Install Grounding Clamp & Cable

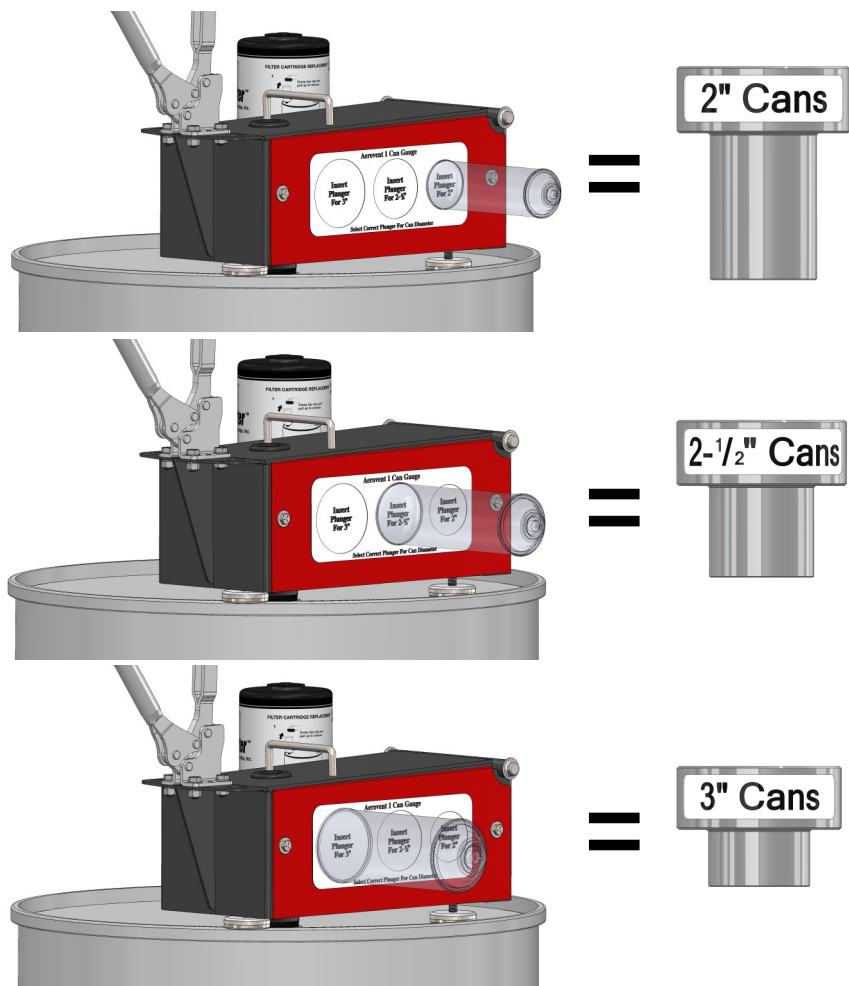

- Attach grounding clamp (H) to grounding source (example: metal water pipe)

1

Measure Can Size

- Match bottom of can with circle on label
- Select plunger that matches can size: 2", 2.5", or 3"

2

Install Plunger in Lid

- Lift operating handle
- Install plunger from step (1) into rubber grommet on lid

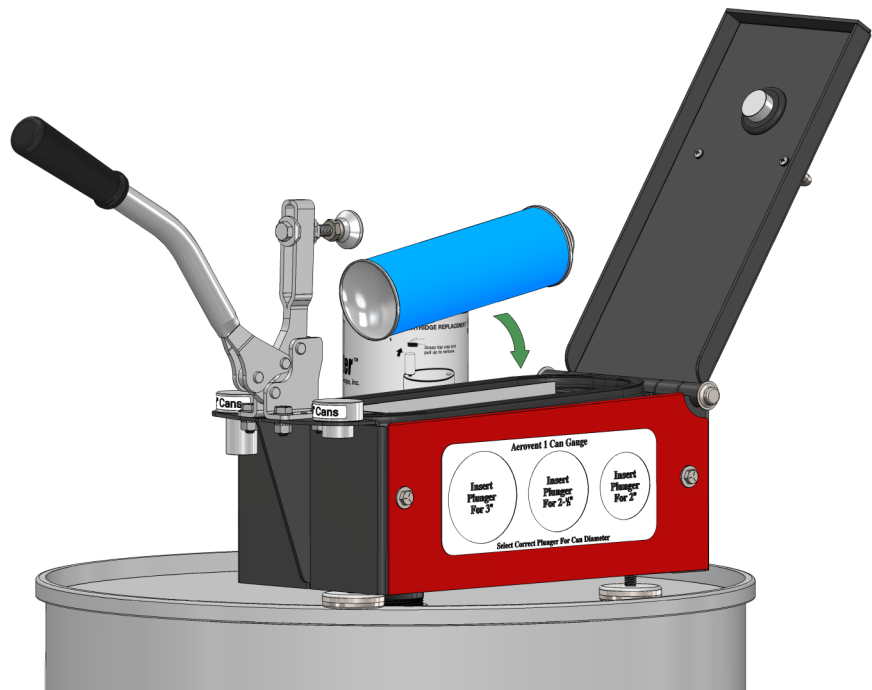

3

Insert Can(s) into Unit

- Lift lid
- Insert can with can bottom towards the operating handle against the can stop

⚠ NOT FOR USE WITH EXPANDING FOAM SEALANTS OR SPRAY ADHESIVES

4

Puncture Can

- Close Lid
- Lower operating handle completely
- Wait 15 sec. for "empty" cans, 45sec for "full" cans. On Viz-a-Ball equipped models, wait until ball stops moving
- Lift operating handle, open lid and remove can(s)
